SHARATH SAJEEV

GAME DESIGNER · LEVELS, ECONOMY, SYSTEMS · BANGALORE

sharathsjv@gmail.com sharathsjv.github.io/game-designer-portfolio linkedin.com/in/sharathsjv

sherpai.itch.io

Game designer with close to three years of experience across shipped free-to-play mobile games at Juego Studios and VR training simulations at AutoVRse, built in Unity. I design levels, economies and progression systems, write clear design documents, and prototype until the game plays well. I iterate from playtests and work closely with art, engineering and QA.

EXPERIENCE

AutoVRse, Bangalore · VR Level Designer

Aug 2024 – Apr 2026

- Designed and built interactive VR training simulations in Unity for healthcare, manufacturing and logistics clients, focusing on player navigation, spatial clarity and usability.
- Built reusable interaction systems (grab, touch, UI, feedback) and environment templates such as fire safety modules, speeding up delivery across projects.
- Delivered high-fidelity interactive prototypes under tight timelines, including modules completed in a 2-day bootcamp turnaround.
- Reworked evaluation and progression logic so player actions, feedback and outcomes matched each module's learning goals.
- Produced design documentation and implementation guidelines for cross-team alignment with engineers, artists and designers.

Juego Studios, Bangalore · Game Designer

Sep 2022 – Sep 2023

- **Music Blast** (match-3): balanced and maintained the hearts/lives system that leads players to IAPs, and set powerup types and amounts per level.
- **Ultimate Cafe Franchise** (match-3): designed both the match-3 and bubble shooter levels.
- **Falcon Dash** (endless runner): designed a distance-based phase system for obstacle, powerup and coin spawning, mixing authored patterns with random spawns.
- **Apocalyptics** (tower defence): balanced weapon costs and damage, and resource spawn locations and amounts.
- Planned and iterated on levels for a live match-3 title with 10,000+ Google Play downloads, tuning challenge, pacing and flow.
- Designed reward and progression systems for a financial literacy game, turning investment principles into in-game maths.
- Prototyped an isometric battle arena from early R&D, defining the core loop and iterating on camera and combat feel.
- Created and maintained GDDs/TDDs and iterated on gameplay from playtesting data and player feedback.

PROJECTS

Everyday Objects (2026, mobile web, playable). A weaponless hitman game built around NPC routines. Dropped a first concept after playtesting, then designed the target's day, systems and onboarding, and iterated over two versions.

Midnight Express (2025, PC design document). Social-stealth smuggling game seen through CCTV: guard alert levels, queue cutting risk and reward, and a five-smuggler relay where mistakes carry over.

Hotel Lucia (2025, in progress). 2D horror shooter that teaches the player the rules, then punishes them for following them.

Get to Bibi (2025, playable). Rhythm platformer prototype with movement and animation synced to the song's BPM.

SKILLS

Design: Level design and balancing, economy and lives systems, progression, systems design, combat design, rapid prototyping

Process: GDD/TDD writing, flowcharts, balance sheets, playtesting and iteration

Engine: Unity (2D/3D), C#, ProBuilder

Tools: Figma, Blender, Maya, Photoshop, Illustrator

EDUCATION

University of the West of Scotland · Diploma in Game Design; BA in New Media Art

2018 – 2022
